Professor J. C. Blair,
Chief of Department of Horticulture

Dear Professor Blair:

I have the pleasure of submitting to you a list of the plants under the care of the Division of Floriculture on the date of January 1, 1919. All the plants enumerated in the list are in the plantings on the area between "the forest" and Mathews Avenue and in the floricultural greenhouses.

The list, as presented, is in duplicate. The first part shows the plants grouped under the following heads:- greenhouse and bedding plants, herbaceous perennials, shrubs, and trees. For convenience, the genera under each sub-heading are arranged in alphabetical order. The second part shows the same plants in family groups with the families arranged alphabetically.

The nomenclature of the list is, as nearly as possible, that of Bailey's Cyclopedia of Horticulture. All changes to the Cyclopedia nomenclature are based upon the names under which the plants were purchased. Where Bailey does not mention a species or variety, the name under which it was secured is maintained. A closer study of the collection will, without doubt, show that some are incorrectly named.

The list shows that on the first day of the year the division was in possession of about 2,000 species and varieties of plants. The collection is of interest both from a commercial and botanical standpoint. The plants are all readily accessible and it is hoped that they will be made use of by all interested in plant material.

Respectfully submitted,

H B Dorner

Professor & Chief in Floriculture
